

## **Peter Hug**

### **Recombinant Innovation**

---

Peter Hug received an undergraduate degree in History and a PhD in Biochemistry and Molecular Biology, both at the University of Cincinnati. He did postdoctoral work on HIV infection at the National Cancer Institute in Bethesda, MD.

In 1999, he began work at Master Chemical Corporation in Perrysburg, OH where he developed metalworking fluids while also pursuing basic research in biostability, foam control, and lubrication. In 2005 he left Master Chemical to start his own company, Recombinant Innovation.

Since then, his work has focused on developing solutions to problems in the lubricants and industrial fluids industries.
